U.S. Orders 2.5 Million More Monkeypox Vaccine Doses, as CDC Looks to Expand Vaccine for Kids

The Biden administration today said it ordered 2.5 million more doses of Bavarian Nordic's Jynneos monkeypox vaccine, while the Centers for Disease Control and Prevention said it was seeking to expand the vaccine for children, despite no known cases yet in children in the U.S.

By Suzanne Burdick, Ph.D.

Miss a day, miss a lot.** Subscribe to The Defender's Top News of the Day. **It's free.

The Biden administration today said it ordered 2.5 million more doses of Bavarian Nordic's Jynneos monkeypox vaccine, bringing the total vaccine doses to be delivered in 2022 and 2023 to more than 4 million.

The news followed Tuesday's announcement of the first phase of the U.S. government's "national monkey vaccine strategy," which will expand testing capabilities and make Bavarian Nordic's Jynneos vaccines readily available to anyone exposed to the virus.

The U.S. Department of Health and Human Services (HHS) said the government's "enhanced" nationwide strategy "will vaccinate and protect those at-risk of monkeypox," as well as provide guidance to communities on how to respond to outbreaks.

"We are focused on making sure the public and healthcare providers are aware of the risks posed by monkeypox and that there are steps they can take — through seeking testing, vaccines and treatments — to stay healthy and stop the spread," said Dr. Rochelle Walensky, director of the Centers for Disease Control and Prevention (CDC).

As part of the strategy, the CDC and HHS began shipping tests to five major laboratory companies across the country: Aegis Science, Labcorp, Mayo Clinic Laboratories, Quest Diagnostics and Sonic Healthcare.

The government, which for months has been buying more Jynneos doses to add to the national stockpile, is now distributing the vaccine. It's currently making available 296,000 doses and expects to roll out 750,000 doses over the summer, with an additional 500,000 doses produced and released in the fall — for a total of 1.6 million doses this year.

The Jynneos vaccine is licensed for use in adults and is considered safer than Emergent BioSolutions Inc.'s ACAM2000 smallpox vaccine, which also can be used against monkeypox, the HHS said.

The vaccine will be made available to individuals "with confirmed and presumed monkeypox exposures," said the HHS.

"This includes those who had close physical contact with someone diagnosed with monkeypox, those who know their sexual partner was diagnosed with monkeypox, and men who have sex with men who have recently had multiple sex partners in a venue where there was known to be monkeypox or in an area where monkeypox is spreading."

Health officials seeking to expand use of monkeypox vaccine for kids, despite lack of safety data

U.S. health officials also are seeking to expand use of the monkeypox vaccine for children, Bloomberg reported.

The CDC is developing a protocol aimed at allowing use of the Jynneos vaccine in children "should cases in children occur," Kristen Nordlund, a CDC spokesperson, said in an email to Bloomberg.

"I'm concerned about sustained transmission because it would suggest that the virus is establishing itself, and it could move into high-risk groups, including children, the immunocompromised, and pregnant women," Tedros Adhanom Ghebreyesus, director-general of the World Health Organization (WHO) said in a Wednesday press briefing.

"We're starting to see this with several children already infected," he added.

There have been 350 cases so far of monkeypox in the U.S. — all adults — according to the CDC. The agency confirmed 5,115 cases worldwide.

The WHO confirmed two cases in children in the U.K. and said Wednesday it is following up on reports of cases in children in Spain and France.

No safety trials have been done in children for the Jynneos vaccine as of yet, partly because clinical research involving participants under the age of 18 must pose no more than "minimal risk" to children, which can be difficult for vaccine manufacturers to argue.

Commenting on the CDC's actions, Dr. Meryl Nass, a member of the Children's Health Defense scientific advisory committee, told The Defender, "It's kind of extraordinary that they want to vaccinate everyone in the country before knowing what the safety issues are."

Nass, an internist and biological warfare epidemiologist, said, "We don't actually know" if the Jynneos vaccine prevents monkeypox in humans because it was developed as a smallpox vaccine, and prevention studies have been conducted using only animals.

"It is hard to believe that the [U.S. Food and Drug Administration (FDA)] gave this vaccine a license when you read the FDA reviewers' comments in their own report," Nass wrote in her June 23 substack newsletter.

"They could not test the vaccine for efficacy against smallpox because there is no smallpox, nor against monkeypox, because the disease is so rare," Nass wrote. "So the FDA relied on neutralizing antibody titers."

At the same time, the FDA admitted there is no established correlate of protection, Nass said.

"This means that there is no evidence that the titers represent actual immunity to infection," Nass wrote. "So FDA relied on animal studies to simply guess the vaccine might be effective in humans."

According to the FDA, the effectiveness of Jynneos for the prevention of monkeypox is "inferred from the antibody responses in the smallpox clinical study participants and from studies in non-human primates that showed protection of animals vaccinated with Jynneos who were exposed to the monkeypox virus."

Jynneos, a replication-deficient live Vaccinia virus vaccine, was licensed in the U.S. in 2019, by the FDA for use in individuals 18 and over considered to be at high risk for smallpox or monkeypox.

In 2021, the CDC's Advisory Committee on Immunization Practices (ACIP) voted to recommend Jynneos as a safer alternative to the ACAM2000 vaccine because of ACAM2000's propensity to cause serious adverse effects, including myocarditis and pericarditis — i.e., inflammation of the heart.

However, Nass noted, Jynneos also was linked to heart inflammation, according to the FDA licensure review of the Jynneos smallpox-monkeypox vaccine which reported:

> "Up to 18.4% of subjects in 2 studies developed post-vaccination elevation of troponin [a cardiac muscle enzyme signifying cardiac damage]. However, all of these troponin elevations were asymptomatic and without a clinically associated event or other sign of myopericarditis."

These higher levels of troponin were not studied further, and the reviewers admitted they did not know if the Jynneos vaccine caused myocarditis, Nass said.

The Jynneos manufacturers said they would conduct an "observational, post-marketing study" in which they would "collect data on cardiac events that occur and are assessed as a routine part of medical care."

But myocarditis — particularly asymptomatic forms of myocarditis that lack outer signs of the condition — could fly under the radar of the "routine part of medical care," noted Nass.

The manufacturers would need to test for heightened troponin levels — something that is not typically done in "routine" check-ups.

The authors of a 2015 study reported evidence of heart injury following vaccination in a sample of 1,445 individuals who received a smallpox or trivalent influenza vaccine.

They found that chest pain, shortness of breath and/or palpitations occurred in 10.6% of those who received the smallpox vaccine SPX-vaccinees and 2.6% of those who received the trivalent influenza vaccine within 30 days of immunization.

Additionally, the study authors reported levels more than double the upper limit of troponin — a protein that flags cardiac injury — in 31 of the individuals who received the smallpox vaccine.

"Passive surveillance significantly underestimates the true incidence of myocarditis/pericarditis after smallpox immunization," they concluded.

The authors added:

> "Evidence of subclinical transient cardiac muscle injury post-vaccine immunization is a finding that requires further study to include long-term outcomes surveillance. Active safety surveillance is needed to identify adverse events that are not well understood or previously recognized."

So true. The Covid vax and others destroy the immune system. That way the black-hearted a holes who are running the US and the rest of the world can blame it on HIV!
3 ^ | v · Reply · Share ›

brbg → John Hanek · 4 days ago
yes, the vax is causing "acquired immune deficiency disease" which is the same disease caused by AIDS but not related to sodomy.

chris · 7 days ago
It appears that the patented Bavarian Nordic genetic sequence in their Jynneos vaccine MVA-BN is STRANGELY almost identical (0.01% different) with the 2010 by FOUNDATION WYETH LLC SECRETARY DEPARTMENT OF HEALTH AND HUMAN SERVICES patented "NOVEL INSERTION SITES IN POX VECTORS" sequence with code in GenBank: FW576867.1.
Who is WYETH LLC?? SInce 2009, part of Pfizer... More details on it updated just yesterday at:

Reason · 6 days ago
The first jab must have liquidated the brains of the recipients if they're even remotely considering lining up for a dangerous, untested shot for a contrived disease that even if real, has a near 100% survival rate. The world has gone mad!
5 ^ | v · Reply · Share ›

brbg → Reason · 4 days ago
Even COVID had a near 100% survival. The CDC admits that the numbers of deaths reported has been greatly exaggerated. It is closer to the TOTAL number of deaths rather than just COVID.
^ | v · Reply · Share ›

GrouchyMathGrad · 7 days ago
Sounds like this has real potential to gut the gay community. People in the gay community tend to be extremely liberal, so they have had two or three COVID shots already. many will keep getting COVID boosters regardless of bodily warning signs to stop, and now they will get these, which will add on the heart damage.

By contrast, a lot of conservatives skipped the COVID shots, or at least stopped once they got the COVID or bad reactions. And not as many conservatives are gay, so not nearly as many will be taking this monkeypox poison.
5 ^ | v · Reply · Share ›

Leslie N → GrouchyMathGrad · 5 days ago
I couldn't agree more! My now EX childhood best friend happens to be gay. I've known him for over 35 years. He's completely conned. And worse yet- his brother is autistic. His mom must know that autism is caused by vaxxes because she wouldn't get a covid shot. I can only imagine her pain as she watched her healthy gay son get more vaxxes. Since i got off of fakebook he keeps sending msgs to my hubby to try to pass to me since I won't talk to him anymore. My hubby told him off and told him covid isn't real. I think I will ask my hubby to unfriend him because he's sadly toxic. I cannot take dealing with brainwashed people.

"The Jynneos manufacturers said they would conduct an "observational, post-marketing study"" - Sounds familiar. We don't know all the side effects, so lets give it to everybody and see what happens. Someday this time will be looked back on as the "Great Culling" or worldwide genocide.
5 ^ | v · Reply · Share ›

LinUK · 6 days ago
The **KNOW** from studies done years ago that a smallpox vaccine should **NEVER** be given to anyone with a dodgy immune system, even as slight as allergic eczema.
Because it can create a deadly reaction.
As the jabbed have weakened immune systems it's obvious what will happen and the uninformed will believe it when they're told it's some deadly new variant.
4 ^ | v · Reply · Share ›

stevebilliter · 7 days ago
No such thing as "Monkey Pox Virus." No virus has ever been isolated by Koch's Postulates. Older studies show the flu shot causes skin eruptions years ago. It's always a toxin of some sort that causes skin lesions--even excess sugar causing pimples that could get infected as I had when very young. It's one of the known symptoms of CV 19 injections.

Covid vax rates have fallen off drastically and the killers are trying desperately to find another way to deceive people into another DNA-altering death shot by trying to scare us with the fake MP "virus."

I predict that it will not work--neither will another Scamdemic MP Virus 2.0 with lockdowns and other draconian measures--if they try this, there will be revolts and rebellion like has never been seen before. This large-scale scam has woken many of us up including me--I see no evidence whatsoever for germ theory which has caused untold deaths, misery, destruction, child kidnappings and other chaos.

Everyone knows someone who has been injured or killed by the CV 19 mRNA vax--people are waking up.

Dr. David Martin and company have rock-solid evidence of government involved genocide planned since at least 2015 and are trying to bring Biden and other criminals to justice in our court system. They have 73 documents with coronavirus patents of in silico (computer generated) genomes of invented viruses showing the depopulation conspiracy. They are trying to kill us and I don't take that lightly.

Charlene Mibus · 7 days ago
We have read the most common ways to get monkeypox which I'm sure most little kids are not involved in. Now they are pushing the lies off that it is "changing" and soon will infect the whole world when it is still just what it has always been. Continual lies that are working due to a large number of people who are too stupid to look at what the covid vaccines are doing to those double vaxxed and double boosted. The truth is right there as more and more end up with covid, in hospitals and dead after multiple vaccines. Why can so many people be so blind? And now they are letting the same poison be jabbed in their little kids and babies? And next it will be monkeypox. Older people are immune to it due to the smallpox shots when in school but now they have missed out on millions who can't stop them with that and going after the children who have no excuse. It is evil to the core and still people keep running to be in line for the poison, deadly jabs and worse yet pushing their children to have them. FEAR from the devil and his followers.

John Hanek · 6 days ago
Oh puleez! Gimme me a break from all this "virus" nonsense! **NOT EVEN ONE so-called "virus" has ever been purified or otherwise demonstrated to exist outside of the human body!** The so-called Covid "virus" is a set of symptoms caused by an engineered and dangerous spike protein WHICH IS CONTAINED IN THE VAX! A "virus" is created in and only exists inside the body as a repair protein against something that's not right IN the body.

Here's what the CDC has to say about "Covid" (now that they can no longer profit from the hysteria):
People with these symptoms may have COVID-19:
Fever or chills
Cough
Shortness of breath or difficulty breathing
Fatigue
Muscle or body aches
Headache
New loss of taste or smell
Sore throat
Congestion or runny nose
Nausea or vomiting
Diarrhea
-----------THIS IS A DESCRIPTION OF THE COMMON FLU!!!-----------

cdc.gov/coronavirus/2019-nc...

Dee · 7 days ago
Now that the general public has mass psychosis about covid and all its off-shoots like "shingles" and "monkeypox" (very similar, hmmm) they will run to get stuck yet again with another sketchy vaccine so they can get killed off quicker. Looks like safety trials are out the door for vaccines anymore, now that the covid untested vaccines were very popular for the unvigilent sheeple.
A neighbor is covered in painful festering pustules from his shingles vaccine. Sad.

Saw a video on Telegram of Pfizer's CEO who was filmed saying "They had goals, the fulfilling of a dream starting in 2019 for the next 5 years to reduce the world population by 50% by 2023". He then said "Today, this dream is becoming a reality."
2 ^ | v · Reply · Share ›

Leslie N → Dee · 5 days ago
I do believe that video was doctored unfortunately. That's not what he said but sadly that's what may happen. There is NO Monkeypox- just an immune system reaction that resembles a rash. And now they have to specify that it will affect gay men? Sounds like their latent HIV infection will resurface due their newly damaged immune system compliments of the covid shots.
3 ^ | v · Reply · Share ›

Double_Up · 7 days ago
What a waste. No need to get a dangerous shot for coinvid or moneypox
2 ^ | v · Reply · Share ›

Kevin G. · 7 days ago
Personally I believe this should be first tested on Bill Gates and Anthony Fauci and George Soros! And let's be generous! 30 shots a day for 7 days or more! Maybe give Gates 666 shots!

John Hanek → CateOKeefe · 5 days ago · edited
The only way to truly be healthy and stay healthy is to eat what God gives us in Nature. Man's chemical-laden, poisonous garbage, so-called "food" kills you slowly. Weston A Price discovered that indigenous peoples around the world had ZERO chronic conditions until they were introduced to refined flour and sugar. I've been eating God's food for years- 68 years old with zero chronic ailments or pains. My favorite meal: 1 apple, 1 orange, green salad, fill up on Adam's 100% Natural Peanut Butter sweetened with Stevia or boiled potatoes with butter instead of P Butter. I don't have a prob with meat, I just pretty much lost my desire to consume it. DrRobertYoung dot com and WestonAPrice dot org are two excellent references. At WAP click on the journals tab at the top of the page to view more articles than you can possibly ever read. Dr. Robert O. Young, DsC, MsC, MD, PhD is a truth teller and is highly suppressed, as is the WAP Foundation.

The so-called Covid-19 "virus" was spread around the world, not because it exists in Nature as a dangerous "virus", but because there is a dangerous spike protein CONTAINED IN THE VAX that harms people. The truth is that no virus has ever been purified, isolated or otherwise demonstrated to exist outside of the body by ANY lab ANYWHERE in the world.

Bottom line:
1- Never, EVER get vaxxed again for ANYTHING!!
2- Stop eating man's garbage.
3- Eat what God gave us in Nature.

David Butterworth · 7 days ago · edited
It's interesting, if not telling, that before it all (Covid) erupted, no one batted an eyelid, now every disease under the sun is outbreaking and every 'treatment' designed to poison the masses is becoming the norm. Common sense and logic have got thrown out of the window. Instead these have been replaced by untested vaccine products. If people can't see there's an agenda at play, then there's not much hope. And I'm not sure which is more laughable: stocking up on tinned food in case of impending food shortages or tennis champs snubbing what is called the 'royal box' at the Wimbledon tournament.

Leslie N · 5 days ago
Let me get this straight? They're already diagnosing cases yet the tests haven't even been distributed? Complete and utter lies. I now realize that everything the govt says is a lie. My so called 'chickenpox' as a child was simply an immune system reaction to a childhood vaccine. And shingles is simply another immune system reaction most likely due to flu shots. As is this fake monkeypox outbreak. The govt gave grants in 2020 to develop a 'monkeypox' vaccine and now there's monkeypox. The Aids virus was not caused by monkeys either. It was caused by the smallpox vaccine doing it's damage to the immune system. Fauci has many years of practice trying to con people.

The CDC is developing a protocol aimed at allowing use of the Jynneos vaccine in children "should cases in children occur," Kristen Nordlund, a CDC spokesperson, said in an email to Bloomberg.

Yeah, "should cases occur"- of course they will and have started because the MOB Covid 19 mass destructive weapon (all vaccines are, this one greater scale) GMO "vaccine" is causing this so-called "shingles" disease with intended (called "adverse") reactions to shot. Mumps, chicken pox, herpes, shingles and more -all connected to hidden stealth parasites infections (encapsulated parasite eggs in past/present vaccine injections and MOB covid one...many weaponized/AI/Bio synthetic-some chimeric) and the toxins these parasites (mostly worms for these symptoms) release -for one in the excrement parasites release in side of you daily-are excreted through our largest elimination organ-our skin.
